Global InterConnection Group SA Background

Global InterConnection Group SA is a platform for the manufacturing, development, operation, and ownership of interconnectors and other power transmission projects, with three interlocking divisions: (i) High Voltage Direct Current ("HVDC") cable manufacturing to supply grid upgrades and interconnectors, (ii) interconnector assets, and (iii) ancillary services, such as commissioning design, planning and operational management for grids and interconnectors. Interconnectors are power cables connecting different countries' electricity grids, as a means of improving grid efficiency and expediting the transmission of energy internationally from where it is generated to where it is needed. As the world transitions to a NetZero future, and with recent stark reminders of the importance of energy security, interconnectors are recognised as a central component to countries' energy strategies because interconnected grids are more efficient and able to respond to market stress.

The nucleus of this platform is Global InterConnection Group SA's existing holdings in Advanced Cables and Atlantic SuperConnection, which will be supported by a design, planning and operations division (to be named GIG Services). Advanced Cables is developing a 1,500+ km/year capacity HVDC cable manufacturing facility in the North East of England; a testing and research centre; and an aluminium stranding factory in Iceland,; while Atlantic SuperConnection is developing a 1.8GW interconnector between Iceland and the UK.
